// generative instrument

Fracture

diceFriend / quick start

Mallets, bells and metal. Evolving phrases. Fractured rhythms.

START: USB-C power + 3.5 mm stereo audio out. Connect to a mixer or speakers; begin with the listening level low.

AS: three evolving percussion parts play themselves. **TS:** play the three voice pads, CV or MIDI notes.

TS pads: three voices from the mallet / bell / metal instrument. Pitch follows evolving scales and phrases.

// SIX KNOBS / TWO LAYERS

P	NORMAL	SHIFT
1	Mallet: wood > glass > noise	Tempo: 7.5-375 BPM
2	Mallet decay	Density of all three parts
3	Bells: pure > FM > fold	Repeats: intensity / 2-6 hits
4	Bell feedback / sustain	Local rhythm deformation
5	Metal: bar > spring > noise	Glitch: freeze / reverse / bits
6	Global stereo feedback	Evolution / divisions

SHIFT: up = second layer; down = normal. **Pickup:** After switching layers or rolling DICE, turn the knob through its saved value to take control.

// DICE / SHIFT

Tap DICE: randomize the current layer only. **SHIFT up:** rhythm layer. **DICE 3 s:** AS / TS. **SHIFT + DICE 10 s:** bootloader.

// CV IN

CV1: clock; in TS, triggers all 3 voices.
CV2: timbre modulation; in TS, scale-step selection and rising-edge triggers.
Banana: 0-9 V; common GND.

// USB MIDI

IN: channel 1 notes, Clock and transport.
OUT: TS pad notes; 24 PPQN Clock with internal / CV timing. **Panel:** CC20-25 = normal P1-P6; CC26-31 = SHIFT P1-P6.

High normal P6 sustains resonance; lower it to let sound fade. CV > MIDI > internal; MIDI returns after 20 s without CV, internal after 30 s without external timing.
