// generative instrument

Pulsar_OS

diceFriend / quick start

Dual pulsar orbits: isolated impulses, folded rhythms and feedback clouds.

START: USB-C power + 3.5 mm stereo audio out. Connect to a mixer or speakers; begin with the listening level low.

AS: dual pulsar orbit. **TS:** Classic / Cross-Feedback / Folded / Feedback Cloud.

AS: T1 freezes orbit / steps; T2 adds bursts and smear; T3 adds nonlinear pulse contrast. **TS:** three gated voices.

// KNOBS / AS

P	NORMAL	SHIFT
1	Tempo / density / transpose*	Stereo / audio-rate range
2	Pulse width	Cross-feedback
3	Feedback	Pattern mutation
4	Nonlinear shape	Pattern length: 2-16
5	Drift / chaos	Smoothing / orbit
6	Tone / filter	Output drive

// KNOBS / TS

P	NORMAL	SHIFT
1	T1 pitch	Pulse width
2	T2 pitch	Feedback
3	T3 pitch	Nonlinear shape
4	T1 decay	Stereo spread
5	T2 decay	Body / resonance
6	T3 decay	Output drive

SHIFT: up = second layer; down = normal. **Pickup:** After changing layers or using DICE, move a knob to take control of its stored value.

// DICE / SHIFT

Tap DICE: randomize AS without changing tempo; in TS, randomize the scene and choose an engine. **SHIFT + DICE 3 s:** randomize / reset. **DICE 3 s:** AS / TS. **SHIFT + DICE 10 s:** bootloader.

// CV IN

CV1: trigger / clock. **CV2:** modulation; repeated pulses can become clock / triggers.
Banana: 0-9 V; common GND.

// USB MIDI

IN: notes with three-voice TS allocation; Clock. **OUT:** TS pads on channels 1 / 2 / 3, AS notes, CC16-18, CV2 pitch bend. Musical MIDI Thru. **Panel:** CC20-25 = normal P1-P6; CC26-31 = SHIFT P1-P6.

*With external clock, normal P1 transposes the second MIDI-output layer. Low density and narrow width give separate impulses; high settings approach drones.
